

03 · Screens & Flows

Screenshots were captured with headless Chrome at **390 × 844** (iPhone-class portrait), device scale 2×. They live in `./screenshots/`. Only a handful of screens have a URL; most are JS-router views inside one HTML file, so the inner screens are described richly rather than each captured.

Screen inventory

A · Client app (`index.html`) — router views (`go(page)`)

#	View id	Name	How reached	Captured
1	<code>entry</code>	Guest entry / onboarding	app open (default)	<code>client-entry.png</code>
2	<code>home</code>	Home / hub	after guest enter	<code>client-home.png</code>
3	<code>igaming</code>	iGaming Solutions	Home → Solutions	—
4	<code>catalog</code>	Products catalog	Home → Products / bottom tab	—
5	<code>market</code>	Marketplace (vendors)	Home → Marketplace / bottom tab	—
6	<code>advise</code>	AI Advisor	Home → "Спросить AI"	—
7	<code>regional</code>	Regions & Licenses	Home → Regional	—
8	<code>register</code>	Registration form	Marketplace → "Разместить продукт" / "Уже есть аккаунт?" area	—
9	<code>chat</code>	Live chat with manager	header/bottom chat icon	—
10	<code>cart</code>	Interest cart	header cart icon	—
11	<code>more</code>	More / overflow menu	bottom tab "Ещё"	—
12	<code>loyalty</code>	Loyalty	More → Loyalty	—
13	<code>sign</code>	Agreement signing	deep link <code>?sign=<id></code>	—

B · Standalone HTML pages (have real URLs)

#	File	Route	Name	Captured
14	<code>login.html</code>	<code>/login</code>	Unified login (admin+staff)	<code>login-unified.png</code>

Admin/staff internal navigation is a horizontal tab strip; no nested URLs.

User flows (numbered)

Flow 1 — Guest enters and gets an AI recommendation (client happy path)

1. App opens on `entry` (`client-entry.png`): logo, "Войдите, чтобы начать", name field, contact field, language, "Войти как гость".
2. User types a name (+ optional contact), taps **Войти как гость**.
 - Writes `visitors` (if consent given) + `events{type:entry}` ; sets `localStorage bc_guest` , `window.USER` .
3. Lands on `home` (`client-home.png`): greeting with name, search, section cards, quick-access grid, AI CTA.
4. Taps **AI advisor** → `advise` ; types a business need; taps **"Получить рекомендацию"**.
5. Client builds KB (catalog + vendors) → `POST /api/advisor` → renders a grounded recommendation (or `aiLocal` fallback if the endpoint fails). Fires `events{type:ai}` .
6. From the recommendation the user can jump to a solution/vendor, **add to cart**, or **chat with a manager**.

Flow 2 — Browse marketplace → request demo → becomes a lead

1. Home → `market` (Marketplace).
2. Filter by category chip (Все / Payment / Slot / Games...).
3. On a vendor card tap **Демо** (or **+ В корзину**).
4. Creates a `lead{source:'demo_request'|'cart', visitor_name, contact}` and `notifyApp` ; increments vendor impressions/clicks.
5. Lead surfaces in Admin **CRM/Dashboard** and in the responsible Staff cabinet's **Мои лиды**.

Flow 3 — Register a product/partner application

1. Marketplace → **"Разместить продукт"** (or Register entry) → `register` .
2. Pick a role (buyer / game / pay / affiliate...); form fields change (`regFields()`).
3. Fill company, product, category, contact (email required), regions, description.
4. Submit → insert `applications{status:'pending'}` + `notifyApp` ; confirmation card shown.
5. Admin **Заявки на продукт** (`mod`) moderates → approve → publishes a `vendor` (badge) that then appears in the Marketplace.

Flow 4 — Live chat visitor ↔ manager

1. Client taps chat → `chat` ; a **mock** greeting from "Ани" appears.
2. First message creates `threads{kind:'visitor', guest_key:anonId}` ; text/files saved to `thread_messages` (+ Storage uploads).
3. Client polls messages 3.5s. If the user closes chat, a background watcher (6s) toasts **"Менеджер написал вам"** when a `role:'staff'` reply lands.
4. On the other side: Admin/Staff **Чат** lists visitor threads, replies as `role:'staff'` .

Flow 5 — Team member logs in (unified /login)

1. Open `/login` (`login-unified.png`): email/login + password (+show/hide), language.
2. Submit → `POST /api/login {login, pass}` (auto mode).
3. Server checks admin first (env `ADMIN_LOGINS` or a `staff` row role=Админ), then staff (`staff` row, active, pass).
4. Response:
 - `{ok:true, dest:'admin', profile}` → set `sessionStorage bc_admin` → redirect **admin.html**.
 - `{ok:true, dest:'staff', profile}` → set `bc_staff` (JSON) → redirect **staff.html**.
 - `{ok:false}` → error "**Неверный логин или пароль**".
5. Regular users instead follow "Открыть приложение →" back to `index.html` .

Flow 6 — Admin moderates and manages a deal

1. `/login` → **admin.html** → **Дашборд** (`admin-dashboard.png`): KPIs, who's online, new applications/leads, funnel.
2. **Заявки** → open an application → approve → publish vendor.
3. **CRM** → a lead becomes a **deal** (`BC-####`); move through 6 stages / 7-step flow; assign responsible people by role.
4. **Соглашения** → draft agreement tied to the deal → send signing link (`index.html?sign=<id>`) → sign → mark paid.
5. **Задачи / Документы / Чат / Аналитика** as needed.

Flow 7 — Staff daily use (cabinet)

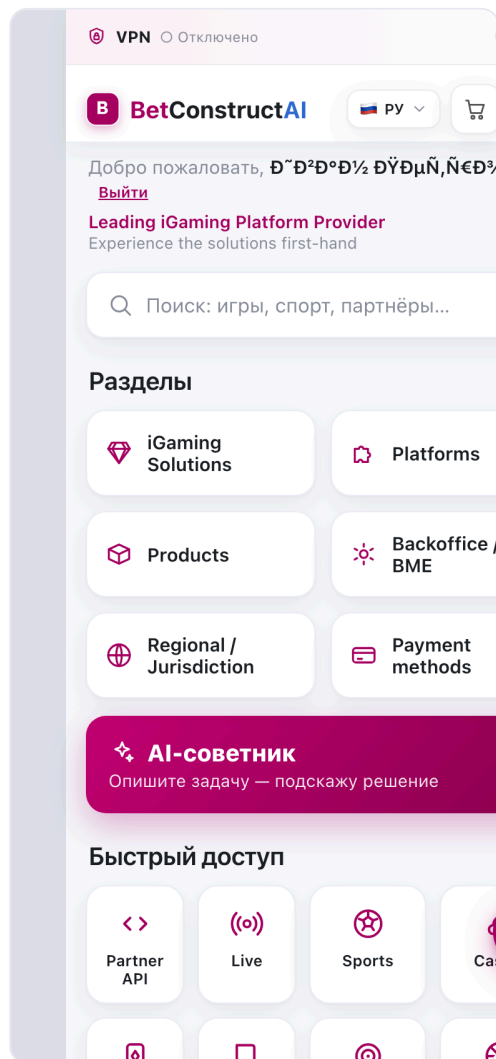

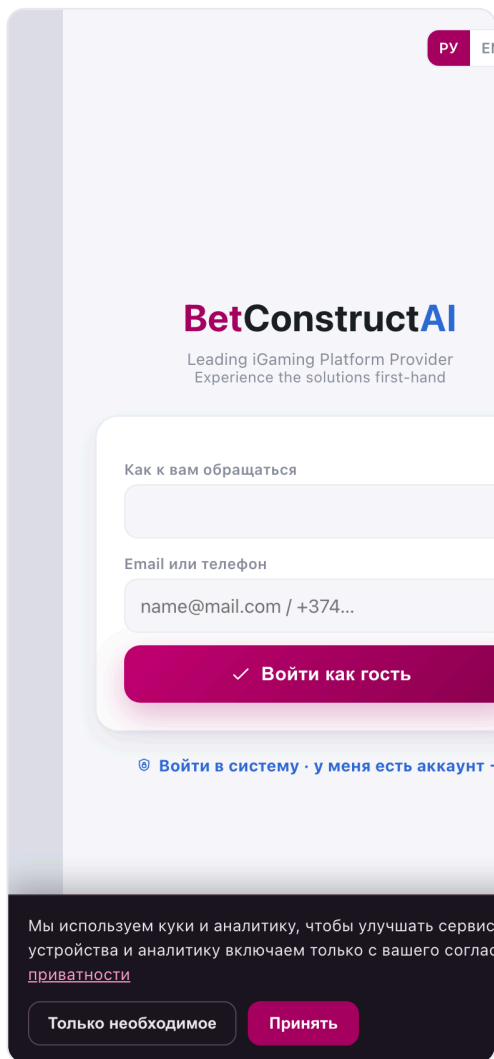

1. `/login` → **staff.html** (`staff-cabinet.png`): **Обзор, Онлайн** (who's on site + chat), **Мои лиды, Мой CRM, Чаты, Смена, Профиль**.
2. Everything is scoped to the logged-in staff member (`S`); no moderation/team/content tabs.

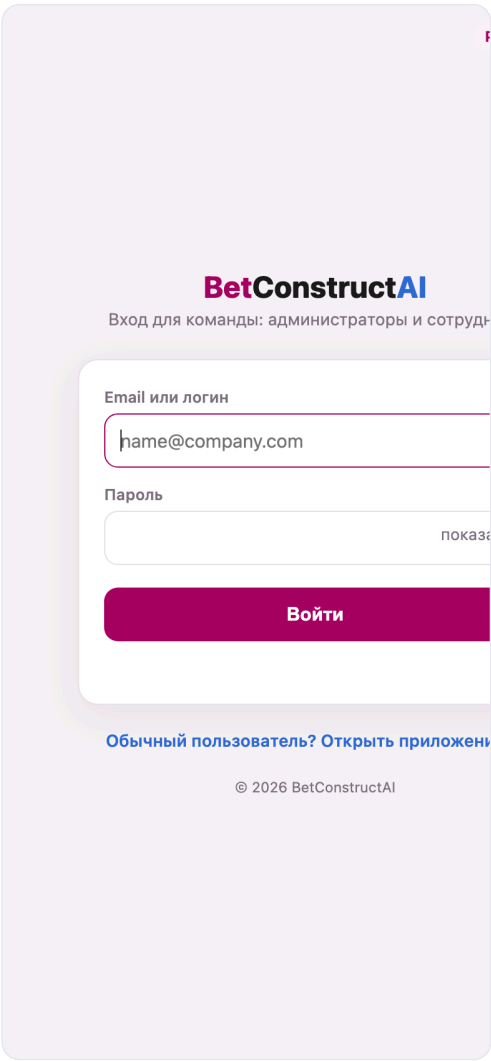

Flow 8 — Consent / privacy (GDPR)

1. On first client load a **consent banner** appears (dark `#1c1420` , pink `#ff9ecb` accents).
2. Until the user taps **Принять**, FingerprintJS and `track()` analytics are **off**.
3. "Политика конфиденциальности" opens `privacy.html` (`privacy.png` , RU/EN toggle).

Политика приватности

Последнее обновление: 8 сентября 2026

Настоящая Политика описывает, какие данные собирает платформа **BetConstructAI** (B2B-маркетплейс iGaming-решений), с какой целью и как вы можете этим управлять.

1. Какие данные мы собираем

Только с вашего согласия (кнопка «Принять» в начале документа).

- **Идентификатор устройства** — стабильный код (FingerprintJS), чтобы не создавать дубли одного пользователя.
- **События использования** — просмотры страниц, добавления в «корзину интересов», запросы демо-версии, обращения к AI-советнику, поисковые запросы.
- **Технические данные** — тип браузера, язык, часовой пояс, разрешение экрана.

Когда вы указываете их сами (для связи):

- **Имя и контакт** (email или телефон) — при гостевой заявке или для связи с менеджером.
- **Содержимое переписки** с менеджером в чате.
- **Данные заявки партнёра/аффилиата** — компания, регионы, описание продукта и т.п.

2. Зачем мы их используем

- Связать вас с менеджером и обработать вашу заявку.

The remaining inner screens (catalog, marketplace, advisor, register, chat, cart, and the 10 non-dashboard admin tabs) have no standalone URL and were not individually captured; see the per-screen descriptions above and the component inventory in `design/THEME.md` .
